

Presentation Style Guide @ Hackaton

Structure, style & assets — all in one place

Agenda

Layout

Fonts, sizes, margins etc. according to Maverx Template

Structure

The required order of your slides

Assets

Templates of assets you can use

Examples

Real slides with speaker notes from other trainings

Other

Other slides you can use as a basis

Title < Space Grotesk Bold> - 33 pt

Subtitle (optional) <Space Grotesk> - 22 pt

Main text for 'bullet points' <Raleway or Space Grotesk> - 15+ pt

Emphasize important words with color

Use empty lines between points or increase line spacing here

Don't use • bullet points for the first line of text

- Only for subtext – 20+ pt. regular
- For slides with a lot of text – 18 pt. is also fine
- Press **tab** once for indentation

Try to avoid using / and , in texts

- Commas are fine in some cases – *but this is better*
- Replace left/right with left or right – *or left & right*

Alternative Style Title – 33 pt

Subtitle – 25,5 pt | “sub-subtitle – 21 pt”

Main text for bullet points – 22-24 pt & Bold

Emphasize important words with color

Use empty lines between points or increase line spacing here

Don't use the • bullet points for main text

- Only for subtext – 20+ pt. regular
- For slides with a lot of text – 18 pt. is also fine
- Press **tab** once for indentation

Try to avoid using / and , in texts

- Commas are fine in some cases – *but this is better*
- Replace left/right with left or right – *or left & right*

Theme Color Usage

#0D006A	#1A0040	#3F0576	#EF4453	#F48A28	#00B0F0
Primary Dark Titles & body text	Dark Purple Cover & section slides	Deep Purple Section headers, borders	Rose Red Secondary accent	Orange CTA, inline highlights	Teal CTA, inline highlights
#262626	#BCB3FF	#F7B8C0	#FAD0A8	#9FE6FF	
Dark Grey Captions, footnotes	Lavender Tint Card backgrounds	Rose Tint Derived from Rose	Orange Tint Derived from orange	Teal Tint Derived from Teal	
#F2F2F2	#EDE9FF	#FEF0F1	#FDEBDB	#E7F9FF	
Off-White Background, text on dark backgrounds	BG Lavender Alt content background	Rose Tint Background Soft shape colors, derived from Rose	Orange Background Derived from orange	Teal Background Derived from Teal	

Style guide

Color usage | “How do I pick the right color?”

The lighter the background – the darker the highlights

- Use hard or darkened colors for light backgrounds
 - And pastel colors for dark backgrounds

New colors should always be introduced by adding or removing brightness to existing colors

Try using no more than three base colors per slide

- Or risk looking like this very slide, that violates it ;)

Styleguide

Margins

Flexible area

Safe area

Flexible area

Flexible area

Flexible area

Flexible area

Flexible area

Storytelling

Examples | “How do I pick the right color?”

The pipet is your biggest friend

Select a color and then **add white** or **add black** for consistency

Dark

Rose red

Orange

blue

Accent 1

Accent 1

Accent 1

Accent 2

Accent 2

Accent 2

Style guide

Best practices | Consistency & Takeaways

Don't move the title or subtitle unless absolutely necessary

- If so, **copy the new placement** to **all** other slides

Copying elements from another slide (or deck) is always better

- Especially when creating stories with **compounded icons**

Use the pipet to find the exact color shade, before adding white

- If the target element is not available, copy it to current slide first

Don't be afraid to experiment with text placements

- As long as the composition looks stable, it will look captivating

Agenda

Layout

Fonts, sizes, margins according to Maverx Template

Structure

The required order of your slides

Examples

Real slides with speaker notes from other trainings

Assets

Template slides with assets we can reuse

Other

Other slides you can use as a basis

The structure of your training

Before

- About this session (slide 13 of this presentation)
- Timetable for trainer (slide 14 of this presentation)
- Timetable for learner (slide 15 of this presentation)
- Agenda

Per topic

- Introduction of topic (definition, what does it mean?)
- An example of the topic in practice (can be 1-2 slides)
- An exercise with the introduced topic (Example of exercise slides can be found in topic 4)

After

- Wrap up & Reflection
- Key takeaways
- What's next?

Agenda

Layout

Fonts, sizes, margins according to Maverx Template

Structure

The required order of your slides

Examples

Real slides with speaker notes from other trainings

Assets

Template slides with assets we can reuse

Other

Other slides you can use as a basis

A note before you dive in

The **example slides** and assets that follow are **inspiration** — **not a strict template**.

- Be creative with **layout**, **composition** and **pacing** — not every slide needs to look the same.
- Stick to the **Maverx colours, fonts and overall style** — that's what keeps the deck on-brand.
 - **Download the Space Grotesk font before you start** — it isn't pre-installed on the devices, and the deck relies on it.
- The **order** of slides and the exact **structure** are **flexible** — adapt them to your story.
- Teach theory by **introducing the concept, showing an audience-relevant example, and applying it in an exercise** — multiple concepts can share one exercise. Also, be creative with this!

Example Slides

In the next part, we will show some example slides that are currently being used in other trainings

Four parts:

1. Pre-training slides
2. Topic / theory slides
3. Exercise slides
4. Wrap up & reflection slides

Speaker Notes

We expect the following regarding the speaker notes

Create a **structured facilitation guide** for the trainer *-per slide-* with:

- **Aim** — one clear sentence on purpose
- **Time** — short estimate
- **Instructions** — conversational, trainer-ready, what to say and do step by step
- **Key discussion points** — the 3-4 things that must land
- **Link to reality** — a concrete story or analogy that makes it stick
- **Debrief & Summary** — one punchy closing line

You can look at the example slides to see how it's done.

1 – Pre-training slides

On the next pages you can find examples of the pre-training slides

- NOTE -

ALL THESE SLIDES ARE FROM DIFFERENT TRAININGS. NO SPECIFIC ORDER IS BEING USED HERE

About this session

Learning objectives

- **Identify** where AI can be applied within your own workflows — analysis, document processing, reporting.
- **Distinguish** between automation, decision support and augmentation, and pick the right approach for each task.
- **Apply** AI tools to analyse data, generate outputs and support decisions in realistic scenarios.
- **Critically evaluate** AI outputs — spotting errors, assumptions and risks before acting on them.
- **Design** a practical AI use case for your own work, including value, risks and required human oversight.

Learning outcomes

- **Enable participants** to apply AI in their daily work — improving efficiency, insight and output quality.
- **Build the ability** to use AI responsibly and critically, understanding both its strengths and its limits.
- **Translate AI into real value** by identifying and designing practical use cases.

Target group

Professionals who want to understand how AI can support their work — **no technical or programming knowledge required.**

ALL PROFESSIONALS WELCOME

Good to know

- Practical and hands-on — focused on real use cases, not prompt engineering theory.
- A mix **of concepts, demonstrations and exercises** — so you can apply what you learn immediately.
- You leave with a **concrete use case and next step** to apply AI in your own work environment.

TIME	MODULE	ACTIVITIES – NOTES & INSTRUCTIONS	
10 MINUTES	Understand History & How AI works Goal: Build a foundational understanding of how AI works, its limitations, and why it is now widely applicable.	+/- 5 min	Introduce the evolution of AI — three AI waves, key breakthroughs, and why accessibility (not capability) changed everything
		+/- 5 min	Explain how AI actually works — input → pattern matching → predicted output. Emphasise what AI does not do (no reasoning, no real understanding)
10 MINUTES	Reflect Privacy & Ethics Goal: Develop awareness of risks, responsibilities and ethical considerations when using AI.	+/- 5 min	How AI tools handle data — enterprise vs public tools, data storage, residency, model training
		+/- 5 min	Ethics discussion with real cases — 2–3 scenarios (bias, wrong decisions, positive outcomes). "Is this ethical?" — then reveal and debrief
60 MINUTES	Experience Hands-on AI application Goal: Experience how AI supports work through automation, decision support and augmentation.	+/- 5 min	Introduce the three roles of AI — automation, decision support, augmentation
		+/- 15 min	Exercise 1 — Automation: extract structured data from documents/invoices. Discuss where similar tasks exist in participants' work
		+/- 10 min	Exercise 2 — Decision support: analyse a dataset (anomaly detection). Let AI surface patterns and discuss relevance
		+/- 10 min	Exercise 3 — Augmentation: generate structured output (presentation or summary). Evaluate accuracy and quality
		+/- 10 min	Work on your own case — participants apply one AI role to a task from their own work
		+/- 5 min	Recap the three roles — differences, overlaps, and how they combine in real workflows

Training Title Proper Case

Timetable [Learner – High level]

Agenda

Purpose

Why doing the right things matters

Customer Value Deep Dive

Moments of Truth, Customer Arena, Value vs. Waste

Strategic Alignment

Hoshin deployment & KPI trees

Hands-on practice

Upgrade your A3

Debrief & Next Steps

Insights and filling gaps

2 – Theory & Topic slides

- NOTE -

*ALL THESE SLIDES ARE FROM DIFFERENT
TRAININGS. NO SPECIFIC ORDER IS BEING
USED HERE*

2. Theory / topic slides

Moments of truth (MoT)

DEFINITION

A **Moment of Truth** is every **touchpoint** where a customer **comes into contact** with your **organization** – and forms an (positive or negative) opinion.

Every step is a chance to win (or lose) the customer

Month-end close is a Moment of Truth for finance. That's when the CFO judges you on forecast accuracy. If your project doesn't touch that moment, does it really matter?

What is it?

A method to cascade organisational goals down to every level. So that daily (operational) work connects to long-term (strategic) direction
Developed at Toyota. 1960s.

Hoshin

Direction + Focus

Kanri

Management + Control

'Managing our direction'

1. Vision (5 Y)

"Trusted finance partner to the business"

2. Breakthrough objectives (3 Y)

"Improve financial predictability"

3. Annual goals

"Forecast variance < $\pm 5\%$ "

4. Quarterly Target

Q1: "Reduce late data submissions by 50%"

5. Your Project

"Implement Sales Ops data SLA"

Can you draw this arrow for your project??

“What will happen to AI at the end of the third boom?”

Recent trends within AI

What happens to the data we send?

Processed temporarily

Used to answer, then discarded

Stored

Kept in logs or servers

Used to train model

Becomes part of future outputs

Enterprise AI tools

Examples	Copilot for M365 · Azure OpenAI · Claude for Enterprise
Training	✓ Typically not used to train the model
Location	✓ Processed in your tenant · defined region (EU/US)
Governance	✓ Contracts, audit trails, compliance controls

Public AI tools

Examples	Free ChatGPT · Claude.ai personal · many SaaS AI features
Training	✗ May be used for training – depends on settings
Location	✗ Often unclear · may leave the EU (GDPR risk)
Governance	✗ No contractual guarantees for your data

Practical decision rule

Before using any AI tool, ask three questions

1

Where is my data stored?

2

Is it used to train the model?

3

Is this tool approved by my organization?

KEY TAKEAWAY

The risk is not just what AI produces – it is what you feed into it.

Where AI goes wrong (and why)

Hallucination

AI invents facts, quotes and references that sound completely authoritative —but don't actually exist.

Arithmetic errors

AI is a language model, not a calculator. It predicts what a number should look like — it doesn't compute it

Stale knowledge

Every model has a cutoff date. It doesn't know about recent events, updates, or anything after it was trained.

Overconfidence

AI will never say "I'm not sure". Every answer is delivered in the same calm, polished, confident tone.

A Real Example - An AI-generated explanation of a complex topic — cites an expert, refers to a study from a named institution, and walks through the logic step by step. All of it sounds **credible, coherent, and board-ready**. None of the sources actually exist

ASK THE ROOM – THEN PAUSE

Would you have caught this if it came from a colleague?

The honest answer: probably not. A trusted colleague writing confidently gets trusted — and AI sounds exactly that confident, even when it's wrong.

KEY TAKEAWAY

Confidence ≠ correctness.

Always validate.

The more polished the output, the easier it is to trust uncritically

Compliance patterns

Personal Data

High Risk – Default to off-limits

Names, salaries, client details, employee records. Covered by GDPR — involve specific legal protections.

High-Risk

Internal sensitive data

Context-dependent – judgement required

Board materials, unreleased results, audit documents, internal memos. Depends on the tool, the content and the purpose.

Context – Dependent

Operational Data

Often safe — with approved enterprise tools

Generic workflows, public-domain templates, non-confidential reference. Low sensitivity when used in approved tools.

Often Safe

But Watch out

Even operational data can become sensitive if it reveals **strategy, performance or future direction**

Decision Heuristic

When in doubt If you wouldn't email it externally, you probably shouldn't paste it into an AI tool.

KEY TAKEAWAY- Think before you paste — and understand your tools.

AI automating routine tasks

AI is automating many of the **repetitive administrative tasks** that used to take up **significant time for professionals**, like:

Role 1 - automation

Customer support triage

Reads incoming requests, identifies intent and urgency, and routes tickets to the right team automatically.

~ 60%

Less manual sorting and reassignment

Document processing

Extracts key information from forms, emails, and PDFs — reducing repetitive admin work across operations.

10x

Faster than manual data entry

Operational reporting

Generates first-draft summaries and dashboards from business data — helping teams make decisions faster.

Days
>
Hours

Typical weekly reporting impact

HUMANS STAY IN THE LOOP TO:

design the workflow, validate exceptions, and improve the process when AI confidence is low — that is where human expertise matters most.

KEY TAKEAWAY - AI handles the repetitive work. Your role shifts toward oversight, improvement, and decision-making.

3 – Exercise slides

Next are some slides in which we'll introduce / debrief an exercise (these are **3** different slides for **1** exercise)

Exercise : Upgrade your A3 - Ambition & KPIs

From 0.1 to 0.2

Exercise: Upgrade your A3 0.1 to 0.2

1. In breakout rooms ☐ teams (30/40 minutes)

Open your A3 v0.1 from Session 1 as input. One person shares screen.

2. Ambition / Problem Quadrant ☐ Answer these four questions in the hand out in chat

1. What Moments of Truth are there in your project? Which one is most important?
2. What's the job-to-be-done for your customer ("Holes in the wall / Drill example")?
3. To which Strategic goal does your project connect? (Hoshin, which one?)
4. Why now? (What's the urgency?)

If you don't know/have an answer, **write it down as a question for your sponsor ☐ Alignment!**

3. KPI's Quadrant ☐ Answer these three questions in the hand out in the chat

1. What project KPI's are you using. I.e. which metrics prove customer value has improved?
2. Label each project KPI as Leading or Lagging
3. Link the Organizational KPIs to your project KPIs (If you don't know the tree, write "**need to find out**")

5. Back in main room ☐ Share findings (5 min per team) What changed from v0.1?

Debrief

1. What did you realize you don't know yet about your own project?
2. Which quadrant felt harder, **Ambition** or **KPIs**? Why?
3. What is **ONE** question you will ask your sponsor before **Session 3**?

4 – Wrap up & Next Steps Slides

- NOTE -

*ALL THESE SLIDES ARE FROM DIFFERENT
TRAININGS. NO SPECIFIC ORDER IS BEING
USED HERE*

Wrap-up: What stays

Customer Value: Three lenses to validate impact

Moments of truth

When does the customer judge you?

Customer arena

What job is the customer hiring you to do?

Value vs Waste

What do they pay for vs. what costs us

Managing direction: Two tools to connect work to goals

Hoshin Kanri

Cascade strategy from vision to daily work

KPI Trees

Measure each level to see if we're on track

Wrap-up: What's next!

Catchball: Pitching your A3 Upwards and Sideways

How to present your Ambition
to sponsors (get buy-in)

How to align with peers across
functions (build support)

Practice giving and receiving
structured feedback

A3 as a conversational tool, not a report

Your A3 is how you test
thinking and build alignment

You'll learn how to walk someone
through it

Homework for the next session (18th of june)

1. Finish the Ambition / Problem and KPI Quadrants;
2. Have a dialogue with your Sponsor(s) about the parts that are unclear and update your A3 with the answers;
3. Bring your A3 version 0.2 to the next session.

Key takeaways for today

1

DISCOVER**Spot AI opportunities in business processes**

Recognise where AI can streamline workflows, reduce repetitive work, and support operational efficiency — and where human involvement remains essential.

2

USE**Draft content, analyse information & summarise insights**

Use AI tools hands-on to generate drafts, explain concepts, summarise information, and identify patterns in data or operations.

3

ANALYSE**Weigh the pros and cons of AI in your workflow**

Evaluate the value, risks, and practical trade-offs of integrating AI into existing processes — before committing.

4

VALIDATE**Check AI output for reliability and accuracy**

Apply a practical verification mindset to AI-generated content — identifying errors, hallucinations, and misleading conclusions.

5

NAVIGATE**Apply ethical and operational judgment when using AI**

Understand privacy, governance, and ethical considerations so AI is used responsibly, effectively, and with proper human oversight.

Resources & next steps

Listen to the podcasts

To give you some more foundational knowledge on AI

Work on your case

Continue building your business case together with your team or leverage the canvas for your own

Experiment

Everything that is AI moves at such an enormous pace that it is vital to continue to experiment!

To close it off

I would like you to write down:

- One key takeaway for today
- One action you will take to keep yourself up-to-date

And let's share it with the rest!
